Erich Ormand is the Group Leader for the Nuclear Theory & Modeling Group at Lawrence Livermore National Laboratory. His research involves theoretical studies of the structure of atomic nuclei and their reactions. He is currently pursuing a first-principles description of light p-shell nuclei with high-performance computing and enhanced theories to accurately predict neutron-induced reactions. His research interests span both discovery science as well as applied science; in particular applications pertaining to national security. He received his Ph. D. in physics from Michigan State University in 1986, a M.S. from Michigan State University in 1982, and a B.S. from North Carolina State University in 1979. He has served as chair of the executive committee for the RIA Theory Group (2005-6) and secretary for the executive committee of the FRIB Users' Organization (2007-9). He has over 65 peer-reviewed papers in theoretical physics and is a Fellow of the American Physical Society (2004).
