

André Luiz de Gouvêa is a Professor in the Physics & Astronomy Department at Northwestern University. He received his Ph.D. in Physics at the University of California, Berkeley, and a B.A. and M.A. from the Pontifical Catholic University, Rio de Janeiro, Brazil. Before joining Northwestern, he was a postdoctoral fellow in the theory groups at CERN (1999-2001) and Fermilab (2001-2003). He works on theoretical particle physics and dedicates a large fraction of his research efforts to understanding the properties and interactions of neutrinos and how these can be used to uncover new phenomena and further our understanding of fundamental physics, having published, with many, different collaborators, over 120 scientific articles that have accrued over 50,000 citations. Most of his work helps establish connections between experimental and theoretical efforts in particle and nuclear physics and astrophysics, and he is currently a member of the *Mu2e* and DUNE collaborations, and the Particle Data Group. He is a Fellow of the APS (2012) and the AAAS (2020) and currently serves as the Vice-Chair of the Division of Particles and Fields of the APS.
