Office of Science Update

DOE/NSF Nuclear Science Advisory Committee Meeting

Harriet Kung

Acting Director
Deputy Director for Science Programs

September 12, 2024

FY 2025 Request for the Office of Science

Requests \$8,583M (+\$343M; 4.2% increase over FY 2024 appropriation) with increased investments in Administration priorities to include:

Artificial Intelligence (+\$93M; \$259M)

Fusion Innovation Research Engine (FIRE) Collaboratives (+\$15M; \$60M)

Reaching a New Energy Sciences Workforce (RENEW) (+\$69M; \$120M)

Funding for Accelerated, Inclusive Research (FAIR) (+\$32M; \$64M)

Climate Initiative (\$20M)

Microelectronics (+\$22M; \$95M)

SC Energy Earthshots (+\$95M; \$115M)

FY 2025 Request: Labs, Facility Operations, and Projects

- Operations of the SC-stewarded national laboratories
 - Upgrade core laboratory infrastructure, i.e. utilities and laboratory workspace through ongoing SLI infrastructure projects and General Plant Projects (+\$32M; \$50M)
 - Reduce backlog of deferred maintenance and improve obsolete infrastructure at SC national laboratories
 - Continue the Laboratory Operations Apprentice Program (+\$2M; \$5M)
- ◆ Facility operations
 - Supported at ~88.3% optimal funding levels
 - SC Facilities "rebaselined" to show full costs of operations, including impacts of inflation, staffing costs, telework/remote capabilities, enhanced maintenance activities, etc.
- ◆ Line-item construction and MIE projects
 - Continue ongoing scientific user facility upgrade construction projects
 - Continue to support ongoing infrastructure projects

Office of Science FY 2025 Budget Status

	FY24	FY 25	% Change	House	% Change	Senate	% Change
	Enacted	Request	from FY 24	Mark	from FY 24	Mark	from FY24
Office of Science, Total	8,240	8,583	4.16	8,390	1.82	8,600	4.37
Basic Energy Sciences	2,626	2,582	-1.78	2,617	-0.38	2,563	-2.44
High Energy Physics	1,200	1,231	2.50	1,219	1.50	1,230	2.50
Advanced Sci. Computing Research	1,016	1,153	13.39	1,105	8.76	1,152	13.39
Biological and Environmental Research	900	946	5.11	850	-5.56	930	3.33
Fusion Energy Sciences	790	844	6.84	825	4.43	825	4.43
Nuclear Physics	804	833	3.61	830	3.23	850	5.72
Isotope R&D	130	184	41.54	170	30.77	168	29.23
Accelerator R&D	29	31	6.90	30	3.45	31	6.90
Scientific Laboratories Infrastructure	288	295	2.43	280	-2.78	275	-4.51
Scientific Program Direction	227	246	8.37	238	4.85	246	8.37
Safeguards and Security	190	195	2.63	195	2.63	190	0.00
Workforce Dev. for Teachers & Scientists	29	31	6.90	30	3.45	31	6.90

FY 2025 House Mark Highlights

Funds SC at \$8,390M, +\$150M over FY 2024 Enacted, -\$193M below FY 2025 Request

- \$245M for QIS research; \$15M for research in support of the Quantum User Expansion for Science and Technology program (QUEST); \$20M for testbeds to integrate high performance computing and quantum (flat with the Request)
- \$20M for Energy Earthshots (\$95M below the Request)
- \$40M for FIRE Collaboratives (\$20M below the Request)
- Supports expansion of microelectronics research, including Microelectronics Science Research Centers
- No funding for RENEW or FAIR initiatives
- Directs establishment of a Carbon Sequestration Research and Geologic Computational Science Initiative
- Most constructions projects funded at or near the Request

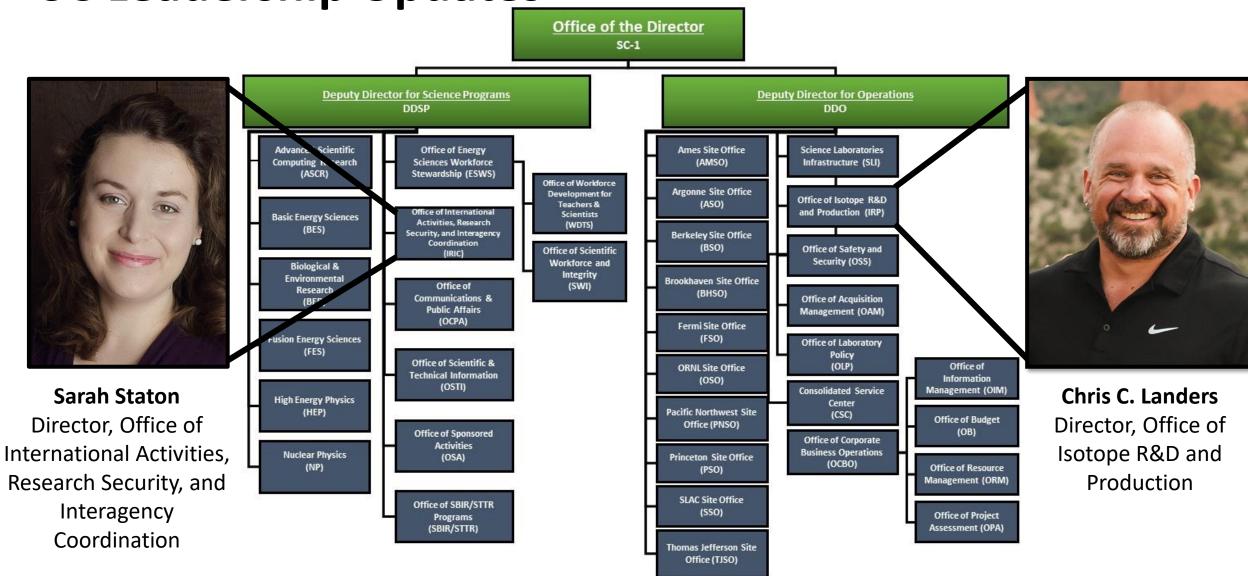

FY 2025 Senate Mark Highlights

Funds SC at \$8,600M, +\$360M over FY 2024 Enacted, +\$17M over FY 2025 Request

- \$160M for Artificial Intelligence/Machine Learning research and \$100M for Frontiers in Artificial Intelligence for Science, Security and Technology (FASST) (~flat with Request)
- Not less than \$265M for QIS research, including five National QIS Research Centers (\$15M below the Request)
- \$60M for Energy Earthshots (\$55M below the Request)
- \$110M for microelectronics (\$15M over the Request)
- Not less than \$45M for FIRE Collaboratives (\$15M below the Request)
- Supports RENEW and FAIR initiatives
- \$25M to establish a Carbon Sequestration Research and Geologic Computational Science Initiative and \$10M for atmospheric methane removal research
- Most constructions projects funded at or near the Request

SC Leadership Updates

Frontiers in Artificial Intelligence for Science, Security, and Technology (FASST)

- The speed and scale at which AI is developing requires investment in a strategic capability to meet DOE mission needs of national security, energy security, and scientific discovery that will support sustained economic prosperity for the nation for decades to come
- A focused approach is needed to
 - Prevent the United States from losing its competitive scientific edge and ability to maintain our national and economic security
 - Catalyze a diverse and competitive innovation AI ecosystem
 - Build technical expertise necessary to govern Al
 - Attract and train a talented workforce.

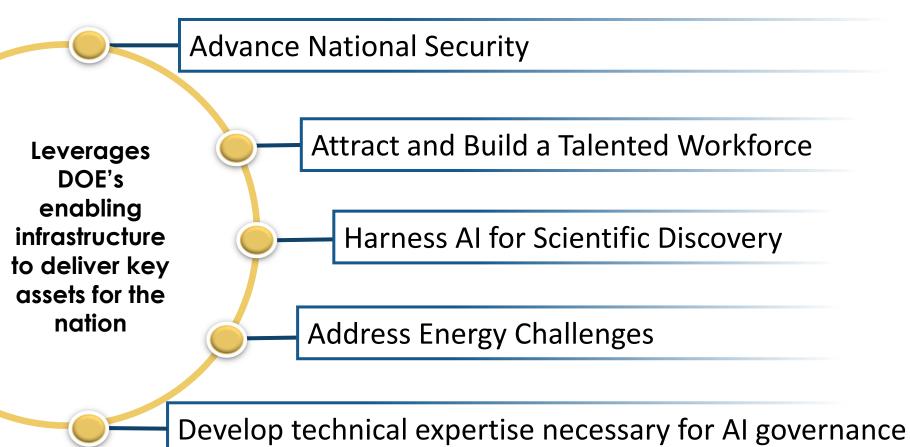

https://www.energy.gov/fasst

FASST will build the world's most powerful integrated scientific AI systems through four key interconnected pillars:

- Al-Ready Data
- Frontier-Scale AI Computing Infrastructure and Platforms
- Safe, Secure, and Trustworthy Al Models and Systems
- Al Applications

DOE has unique capabilities to achieve FASST goals

FASST cuts across all SC core science areas

- **Al for Science** accelerating innovation through scientific Al foundation models trained on highly-curated scientific datasets
- Al Hardware Innovation new Al algorithms and hardware co-design to improve energy efficiency by >100x
- Al for User Facilities optimized, autonomous experiments with realtime data analysis and Al-enabled real-time control of accelerators & detectors to improve operational efficiency
- **Trustworthy AI systems** storage and archival tools for FAIR (findable, accessible, interoperable, and reusable) data and privacy-preserving algorithms to enable science using proprietary and sensitive data
- A Diverse Al Workforce leverage DOE's technical workforce to integrate Al across the science research community

Real-time analysis of atomic microscopy data

Digital twins and system analysis for soils

Theory-aware AI global experiment control

Research Security at DOE: An Evolving Landscape

- Given DOE's broad mission space, the research, technology, and economic security (RTES) policies need to address a wide range of risk levels, and our implementation must be risk-based.
- As RTES policies are developed, DOE and National Labs ensure balance to...
 - Continue to attract and retain the best and brightest;
 - Promote principled international collaborations, which are most beneficial to all when they are:
 - Built upon openness, transparency, parity of intellectual and financial contributions, and mutual respect of IP rights
 - **Driven by** scientist-to-scientist ties and scientific community interest
 - **Promoting** US competitiveness and discovery of the 'best science'

Evolution of Research, Technology, and Economic Security (RTES) at DOE

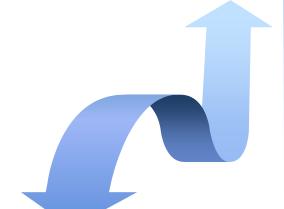

DOE Financial Assistance (FA)

- RTES Policy Working Group (PWG)
 - Function: Address RTES policy development and consistency with interagency processes (e.g. related to NSPM-33 implementation)
 - Includes financial assistance and laboratory policy
 - The PWG is working to update DOE FA policies, such as:
 - Discussing adoption of the NSF-stewarded common forms
 - COI/COC NOPR was released in the Federal Register (closed 8/19)
- Office of Research, Technology and Economic Security (RTES Office)
 - Function: Provide consistency and support for due diligence reviews and risk mitigation in DOE FA and loan activities
 - Office of Science is working closely with the RTES Office to ensure that its due diligence reviews maintain transparency and do not create undue burden on the community

Primary RTES Office Functions

Due Diligence, Liaison & Assessment

- Conduct or facilitate due diligence reviews, in coordination with other internal reviews
- Develop comprehensive risk assessment frameworks
- Review FOAs and awards to ensure the appropriate RTES measures are in place

Information Sharing (Internal)

- Resource to program offices on RTES
- Foster cross-office information sharing through program RTES POCs
- Train offices on how to identify, communicate, and mitigate security risks

Communications & Outreach (External)

Conduct outreach with the broader scientific community on RTES topics

Office of Science Financial Assistance

- The Office of Science (SC):
 - Continues to recommend universal disclosure (sources of support, positions and appointments)
 - Continues to recommend the use of SciENcv to reduce administrative burden by allowing the use of digital persistent identifiers
 - Has already announced the acceptance of interagency common formats for current and pending support and bio-sketches
- SC strongly supports recent actions emerging from its interagency partners:
 - DoD and NIH Decision Matrices, NSF TRUST Framework
 - Continued development of the NSF SECURE Center
- DOE and SC will look to these achievements and related policies as we continue to consider our approach to financial assistance

DOE Laboratory Policy

 DOE uses its Science and Technology Risk Matrix to manage risks at National Laboratories associated with critical and emerging technologies that do not otherwise have control mechanisms

Applies only to:

- Countries of Concern (China, Russia, Iran, North Korea)
- Guidance and management of certain activities at national laboratories (e.g., foreign engagements, CRADAs/SPPs, official travel, foreign national access)

emerging technology topics that do not have sensitivities with economic or national security

emerging technology topics that have the potential to become sensitive. Yellow topics may require additional protective measures.

economic or national security sensitive technology topics that require additional protective measures

DOE Laboratory Policy

Recent Matrix Developments:

- DOE updated the Matrix in 2023 and will continue to do so annually to ensure consistency with major scientific and technological developments.
- An unlimited distribution S&T Risk Matrix has been developed and disseminated to the national laboratories, university partners, and sister science funding agencies.
- In addition, DOE is working to update implementing Orders related to RTES policy to meet WH and statutory requirements while addressing gaps identified by the Department.

emerging technology topics that do not have sensitivities with economic or national security

emerging technology topics that have the potential to become sensitive. Yellow topics may require additional protective measures.

economic or national security sensitive technology topics that require additional protective measures

Interagency and Community Engagement

It is essential that DOE coordinates its research security policy with the interagency, and in my role, I am making it a priority to increase engagement with the research community.

- Continuing to participate as co-chair on the National Science and Technology Council (NSTC) Subcommittee on Research Security.
- Continuing to engage with like-minded allies and partners through State Department-led efforts through activities such as the MCD.
- Increasing public-facing engagements with leaders and membership of organizations such as FDP, COGR, AAU, and APLU, as well as with the AANHPI research community.
 - Engage in meaningful ways that demonstrate our commitment to hearing all voices.

THANK YOU!
